

JERBOA

THE JUMP START INTO YOUR SOFTWARE PROJECT

One single input creates seven reliable project artifacts

SVEN MAHN IT
The Dynamics Authority

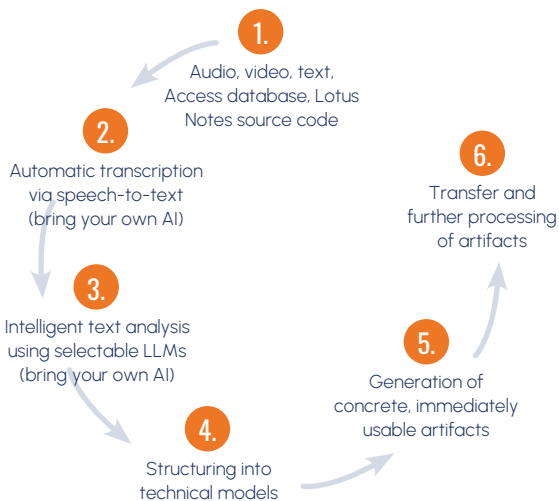

JERBOA

FAST. SECURE. WELL-FOUNDED. THE NEW STANDARD FOR PROJECT LAUNCHES.

Jerboa is an AI-powered delivery engine for software projects. From just one initial input, it generates seven consistent artifacts—dramatically accelerating project kickoff.

Simply speak your requirements freely or record a conversation, explanation, or process description as an audio or video recording. You may also provide content from Microsoft Access databases, Lotus Notes source code, or text. Jerboa automatically transcribes this input, semantically analyzes its content, structures requirements and processes, and automatically generates all project artifacts necessary for software implementation or adaptation. In this way, for example, a conversation can quickly become a reliable basis for planning and executing your project.

ONE INPUT

SEVEN ARTIFACTS

Requirements

Consolidated and structured requirements

BPMN View

Visual representation of the recorded processes

HTML/React/Babel Mockup

Clickable front-end mockup for direct playback

DevPrompt

Structured development prompt as a starting point for implementation

Azure DevOps or Jira Objects

Automatically generated or imported work items

Milestone Overview

Structured project roadmap with phases and deliverables

Offer Proposal

Offer calculation based on the identified requirements

JERBOA

THE MASTER OF PERCEPTION

The jerboa, also known as the desert jumping mouse, is renowned for its leaping ability, its orientation in complex terrain, and its extraordinary senses. With large ears and sharp eyesight, it perceives its surroundings with precision and moves quickly with a few well-aimed jumps.

These traits make it the ideal enabler for your software projects: it listens carefully and observes closely. It quickly absorbs your requirements and processes, works them through, and then powerfully jumps into the project.
